SPECIAL PROGRAM – CONGESTIVE HEART FAILURE (CHF)

CHF is the leading cause of hospitalization among elderly. It is also the most frequent condition that results in patient re-admission to the hospital within 30 days.

Most of these admissions can be prevented by implementing effective post-discharge support strategies to improve patient adherence to medications, disease state education, and risk factor management.

Our CHF post-discharge management program serves the patients types who are:

- Newly diagnosed with CHF
- Recently hospitalized for low ejection fraction
- On multiple medications and with lack of adherence
- Experiencing weight gain –retaining water
- Decreased O2 saturation
- Unstable vital signs
- Low endurance

PROGRAM HIGHLIGHTS:

- Comprehensive assessment of physical and functional status
- Individualized patient care management by skilled professionals
- Multi-disciplinary care coordination
- Medication safety & management - all prescription and over the counter meds
- Care coordination with physician office and risk factor management
- Patient and family caregiver education, motivation, and behavior skills

BENEFITS:

- Addresses patient needs in a convenient and responsive manner
- Collaborative approach to patient condition management
- Facilitates care transition and independent functioning
- Patient outcomes and independence
