DIABETES CARE PROGRAM

Intermittent Skilled Care in the comfort of patient's home

One in four seniors in the US has diabetes. Diabetes is a risk factor for heart disease and individuals with diabetes are prone to various complications and co-morbid conditions. Diabetes remains the 7th leading cause of death in the US and results in high healthcare cost.

Our Diabetes program, with focus on treatment and education, is designed to minimize disease complications and improve patient outcomes by implementing effective care and support strategies to improve patient, education, understanding, motivation, and behavior skills resulting in improved adherence to medications, life style modifications and risk factor management. The program covers disease education, tests and treatments, medication, nutrition, activity, safety, psycho/social factors, and positive health habits.

Our Diabetes management program serves the patients types who are:

- Newly diagnosed with diabetes
- Recently hospitalized or have had multiple hospitalizations
- Have stable blood sugar
- On multiple medications and with lack of adherence or dietary non-compliance
- With foot / skin integrity related issue
- Are home bound, willing and able to participate in the plan of care

PROGRAM HIGHLIGHTS:

- ✓ Comprehensive assessment of physical and functional status
- ✓ Individualized patient care management by skilled professionals
- ✓ Multi-disciplinary care coordination
- ✓ Medication safety & management - all prescription and over the counter meds
- ✓ Care coordination with physician office and risk factor management
- ✓ Patient and family caregiver education, motivation, and behavior skills

BENEFITS:

- ✓ Addresses patient needs in a convenient and responsive manner
- ✓ Collaborative approach to patient condition management
- ✓ Facilitates care transition, independent functioning, and improved outcomes
